ABSTRACT

The present invention relates to antibodies or fragments thereof that specifically bind $Fc\gamma RIIB$, particularly human $Fc\gamma RIIB$, with greater affinity than said antibodies or fragments thereof bind $Fc\gamma RIIA$, particularly human $Fc\gamma RIIA$. The invention provides methods of enhancing the therapeutic effect of therapeutic antibodies by administering the antibodies of the invention to enhance the effector function of the therapeutic antibodies. The invention also provides methods of enhancing efficacy of a vaccine composition by administering the antibodies of the invention.
